

## Site Selection

We chose this site as it is the most efficient for us; near infrastructure, near farms, near trees. Trees will act as a partial filter for the wind so that the bad odour will not infiltrate the residence compound.

## Pattern

The pattern shows circles which represent different invisible forces that will drive each other as well as neighbouring communities. The density of each element has a limit in order to not disrupt the balance as too much of one force is not good. Infrastructure is extremely important to ensure good connectivity between these forces and outside elements and forces.
